SDC355 JavaScript Assistant

Hello and welcome! I'm excited to guide you through your first steps in web development using JavaScript. Today, we'll create an interactive webpage that responds to user input and dynamically changes its content.

Let's get started with the first step: creating the HTML structure for your page.

Step 1: Create the HTML Structure

1. **Create a new file** called `interactive_intro.html`.
2. **Add a basic HTML5 structure** using the following code:

```
<!DOCTYPE html>
<html>
<head>
  <title>Interactive Intro</title>
</head>
<body>
  <h1>Welcome to My Page</h1>
  <p id="name"></p>
  <p id="bio">This is a short bio about me.</p>
  <div id="interests">
    <ul>
      <li>Interest 1</li>
      <li>Interest 2</li>
      <li>Interest 3</li>
    </ul>
  </div>
  <button id="changeButton">Change Theme</button>
</body>
</html>
```

Once you've added this code, let me know, and we can move on to the next step!
